Insurance is the subject matter of the solicitation. LD/2008-09/305.

• Unit-Linked life insurance products are different from traditional insurance products and are subject to risk factors • The premium paid in Unit-Linked Insurance Policies are subject to investment risks associated with Capital Markets and the NAVs of the units may go up and down based on the performance of funds and factors influencing the Capital Market and the insured is responsible for his/her decisions • The name of the Insurance Company and the names of the Unit-Linked insurance contracts do not in any way indicate the quality of the contracts, its future prospects and returns • The various funds offered are the names of the funds and do not in any way indicate the quality of these plans, their future prospects and returns • For more details on risk factors, terms and conditions please read sales brochure of Product carefully before concluding a sale. Please know the associated risks and the applicable charges, from your Insurance agent or the Intermediary or policy document. • The Unit Linked Funds do not offer a guaranteed or assured return. • The names of the Unit Linked Funds and their objectives do not in any manner indicate the quality of the fund, their future prospects or returns.

Dear Customer,

As you may be aware, the Indian equity markets are going through a phase of volatility due to a combination of global reasons and other domestic factors. However, due to India's high domestic savings rate, favourable demographics and strong fundamentals, the country's long term structural growth story is very much intact.

The investment aspect of life insurance is about discipline and having a long term horizon. At MetLife, we believe that such a scenario, begets a strong focus on asset allocation rather than trying to time the market. Therefore, for investments in your Unit Linked policies, we avoid 'timing' the market and believe in a long term perspective.

MetLife* has a 140 year long proud history of financial strength and stability. With total assets under management of over \$550 billion worldwide, we are amongst the highest rated by the best rating agencies in the world**, Standard and Poor's (AA -Very Strong), Fitch (AA -Very Strong) and Moody's (Aa2 Excellent) are a testimony to our financial strength and stability.

At MetLife, we have a capable fund management team that follows fundamentally sound investing principles. It invests your funds into a well diversified set of instruments which ensures that your funds are not exposed to risks associated with individual scrips and sectors.

We are committed to promoting high standards of responsible investing in the industry.

Thank you once again for your continued support to MetLife and hope to have a long and fruitful association

Best Regards,

Rajesh Relan
Managing Director
MetLife India Insurance Company Limited

*MetLife is a 26% share holder in MetLife India Insurance Co. Ltd.
**As on June 2008.

EQUITY MARKET

The Market that was...

The quarter ending September 2008 saw the Indian equity markets suffer declines on the back of turbulence in the US financial markets. Many blue - chip companies in the financial sector in US faced major setbacks and take overs. The ripple effects of the happenings in US saw most equity markets around the world posting significant declines. The Nifty fell by around 3% during the quarter and made a fresh calendar year low. Market activity was largely focused on large caps. Small cap stocks fell sharply on little volumes and low investor interest. The BSE Mid-cap and BSE Small cap indices fell by more than 11% and 17% respectively.

FII's continued to be net sellers and sold almost USD 3 bn for the quarter. Year to date, FIIs have sold more than USD 9.5 bn. The dollar has been strengthening for the past few months globally. This coupled with concerns on a high current account deficit saw the rupee weaken by almost 10% during the quarter.

The uncertainty and negative sentiments in the global markets led to investors buying into consumer staples which saw a strong out-performance. The technology sector fell sharply on concerns of a slowdown in demand from the US. Many commodity stocks too sold off on concerns of falling prices in a slowing global economy.

Fund Manager's view

In the near term, we expect the high level of volatility to persist. In spite of the bail out package proposed in the US, it is difficult to take a call on how quickly the US markets will

return to normalcy. Till that time, it is quite likely that markets globally will continue to exhibit high levels of volatility and Indian markets are unlikely to be an exception.

On the positive side, the recent fall in crude oil and fertilizer prices will reduce the subsidy burden of the government. This is positive from a macro-economic point of view.

With the significant fall in markets, valuations are increasingly turning attractive. The BSE Sensex trades at 13x FY09, which is much lower than 21x FY09 at the start of the year. In the near term, we have a situation of improvement in macro-economic scenario and more attractive valuations. These are pitted against high volatility and negative sentiments. We feel that the present market levels are attractive enough for long term investors.

10-year USA (%)	3.99	3.85	-0.14

Source: RBI WSS & Bloomberg

The September quarter started on a bearish note. Rising oil prices pushed the 10 year yields to a peak of 9.52% in July '08. The gilts, however, staged a smart recovery later in the quarter, tracking the correction in commodity prices and moderating economic growth. International crude oil prices corrected significantly to end the quarter at \$100.64 per bbl after touching a high of \$146 in July. The 10 year Government paper closed at 8.62% levels at September end i.e. 90 bps lower from its peak of 9.52% levels. However, corporate bonds and money market instruments witnessed spreads widening, due to tight liquidity conditions and continued primary issuances.

Inflation, as measured by WPI, ended the quarter at 12.14% (for the week ending 13th Sep) vs. 11.42% in the previous quarter. Liquidity conditions took a turn for the worse due to the impact of advance tax outflows, bond auctions and RBI's FX interventions.

RBI injected liquidity to the tune of Rs 638bn on a daily basis (average) during the quarter. The liquidity gap has deepened significantly in the last few weeks, and might require some liquidity enhancement measures from RBI.

Compared to June quarter, the aggregate foreign exchange reserves declined by USD 20.66 bn to end at USD 291.82 bn. Rupee ended significantly weaker at Rs 46.99/USD from Rs 42.03/USD in the last quarter. This was largely due to persistent dollar demand by oil companies and continued FII selling in equity markets. The total current account deficit widened significantly in Q1 2008-09 to touch \$10.7 billion as against \$ 6.3 billion same period last year.

Global Backdrop

The year-long credit market turmoil is turning into a full-blown crisis and is prompting extraordinary actions from

governments to stabilize markets. The interactive downward spiral among the unholy trinity troubled assets, capital inadequacy and funding illiquidity has intensified, spreading the turmoil to many of the mature economies and now beyond.

The deepening financial market distress and the slowing global growth, triggered by the earlier oil price surge are now clearly feeding on each other. Global growth prospects have worsened significantly. Amid volatility in financial markets, credit spreads widened to record levels. Following the uncertain global environment, we see increased prospects of policy rate cuts by major Central Banks.

OUTLOOK

Indian economic growth has seen significant moderation over the last few quarters. The lag effect of monetary tightening in India and a weaker global growth is likely to cast its shadow on the domestic economy. Inflation is at or close to peaking out and might prompt RBI to pause the rate tightening cycle.

Slowing economic momentum in a potentially easing inflationary environment could lead to a more accommodative monetary policy in the medium-term. RBI may cut rates and/or boost liquidity in the coming quarters, as inflation and growth slow down.

We are optimistic on the medium term prospect of the bond market.
