**Monthly** Fund Performance  
December 2017 Edition

### Month gone by - A snapshot

*Global markets remained buoyant as the US Congress passed the much-awaited tax reform bill. While the developed market index rose by 1.3% in December (20% in 2017), the emerging market (EM) index generated a return of 3.4% (34% in 2017). Indian equity market followed, ending the year at all-time high levels, with the ruling party's victory in recent state elections providing a boost to investor sentiments. However, domestic bond yields hardened sharply amid increasing expectations of fiscal slippage and rising inflationary pressures.*

### Additional borrowing increases fiscal slippage worries

The government increased its borrowing plan by Rs 730bn via dated securities and treasury bills, translating into an additional borrowing of nearly 0.4% of GDP. This has vindicated market concerns of a fiscal slippage amid 1) soft trends of GST collections, 2) lower non-tax revenues due to lower-than-expected dividend transfer from RBI, and 3) supplementary grants for additional spending. Fiscal deficit during April-November 2017 has already reached 112% of the government's budget estimate.

### RBI reiterates its cautious stance

In the recent monetary policy review, the RBI kept policy rates unchanged, citing concerns on inflation. The key factors that are likely to push inflation trajectory upwards include 1) impact of HRA allowances under 7th Central Pay Commission (7CPC), followed by staggered impact of HRA increases by state governments, 2) potential firming of crude oil prices, 3) risk of fiscal slippage, and 4) global financial instability arising from monetary policy normalisation by global central banks. Further, the minutes of recent MPC meeting also signal worries related to demand-pull pressures on inflation as growth revives, thereby pointing towards an end of the easing cycle.

### Fixed income market performance

**Fixed income market declines sharply:** Fixed income market remained under pressure, primarily led by 1) increasing concerns of fiscal slippage following government's announcement of additional borrowing and 2) higher-than-expected inflation reading. Continued increase in crude oil prices to US\$ 67/bbl (+40% since June) has further added to inflationary pressures. Foreign institutional investors (FIIs) were modest buyers in December even as net inflows in 2017 remain robust at US\$23bn. The 10-year G-sec yield rose by 27bps to end the month at 7.3% (up nearly 80bps in 2017).

**Outlook:** The increase in market borrowings has confirmed fears of government breaching its FY18 fiscal deficit target. This, along with pick-up in inflation trajectory and tightening domestic liquidity, has ruled out possibility of further rate cuts. Moreover, gradual monetary policy normalisation by global central banks is likely to add to market woes. As such, bond yields are expected to remain under pressure in the near-term. Movement of crude oil prices, inflation trajectory and government's fiscal stance for FY19 are likely to determine the direction of bond yields in the near-term.

### Equity market performance

**Equity market ends 2017 at an all-time high:** After consolidating in November, equity markets rallied in December, in-line with the broader EM pack. This was largely led by strong domestic inflows and the ruling party's victory in recent state elections. However, fiscal slippage worries and rising crude oil prices kept investors cautious. The FIIs turned net sellers in December, with net outflows at US\$ 739mn (2017: US\$ 8bn). The domestic institutional investors, however, continued to remain strong buyers for the ninth consecutive month, with net inflows at US\$ 1.3bn (2017: US\$ 14bn). The Nifty index rose by 3% in December (2017: +29%) while the mid-cap index was up by a strong 5.4% (2017: +48%).

**Outlook:** After rallying significantly in 2017, equity markets are likely to remain range-bound in the near-term amid rich valuations. On the positive side, corporate earnings are expected to improve over coming quarters as impact of GST fades and consumption picks up. This is likely to provide support to market valuations even as rising crude oil prices poses downside risks to earnings. The upcoming Union Budget is a crucial event to watch out for in the near-term. We remain positive on equity markets in the medium-term on account of expected recovery in economic growth and rising share of financial savings.

## 10-year government bond yield trend

## Equity Market performance

When tomorrow is secure,  
**today is fun.**

**Life protection till 99 years<sup>#</sup>**

## Focus on protection with PNB MetLife Mera Term Plan (MMTP)

Purchasing a Term plan is becoming an essential element in one's financial planning. With the purchase of term insurance you safeguard the financial future of your family.

PNB MetLife Mera Term Plan (MMTP) now offers long term comprehensive protection by extending its coverage age from 75 years to 99 years. The plan provides a protection proposition that allows you the option to take care of your liabilities via opting for life protection upto age 99. You may avail the income options if you wish the proceeds to be split into part income and part lumpsum

The extension of coverage age ensures that the plan provides adequate protection keeping in mind increasing life expectancy. Since a higher segment of the population now lives for a longer duration post retirement, it is essential to provide an option for covering the insured beyond his/her earning years. This ensures that even if the insured has dependents, after retirement, they can be looked after.

Another factor to be considered is provision of a sum of money, not only at a time of an eventuality, but also over a longer period of time subsequently. This is especially important for young families as the regular payout ensures that they can fulfill their future goals. MMTP offers comprehensive income options which allow you to opt for level income or increasing income or income till you child turns 21. PNB MetLife Mera Term Plan caters to the evolving needs of PNB MetLife's customers, to deliver the right solutions to the right customers.

## Quantitative Indicators

- **Standard Deviation (SD)** - It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- **Beta** - It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- **Sharpe Ratio** - It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- **Average Maturity** - It is the weighted average period of all the maturities of debt securities in the portfolio.
- **Modified Duration (MD)** - It is the measurable change in the value of a security in response to a change in interest rates.
- **Bond yield** - Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

## Macroeconomic Indicators

- **Macroeconomics** - Macroeconomics is the branch of economics that studies the behavior and performance of an economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate, gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the economy. Government and corporations use macroeconomic models to help in formulating of economic policies and strategies.
- **Gross Domestic Product (GDP)** - GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- **Gross value added (GVA)** - GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- **Index of Industrial Production (IIP)** - The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- **HSBC Purchasers Managers' Index (PMI)** - Three types of indices - Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- **Inflation** - Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

## Macroeconomic Indicators

---

- **Nominal interest rate** - Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- **Real interest rate** - Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- **Monetary Policy** - Monetary policy is the macroeconomic policy laid down by the Central bank. It involves management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption, growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy involves reduction in money supply to control inflation in the economy.
- **Liquidity** - The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- **Fiscal Deficit** - This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- **Current Account Deficit (CAD)** - Current account deficit is a measurement of a country's trade where the value of imports of goods and services as well as net investment income or transfer from abroad is greater than the value of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency, which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the opposite of this.
- **Investment** - In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

## Market Indices

---

- **Nifty 50 Index** - It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- **CRISIL Composite Bond Fund Index** - It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

## Fixed Income Indicators

---

- **Repo Rate** - The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- **Cash Reserve Ratio (CRR)** - CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

## Fixed Income Indicators

- **Marginal Standing Facility (MSF)** - It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- **Statutory Liquidity ratio (SLR)** - In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

## Others

- **Goods and Services Tax (GST)** - The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- **Foreign institutional investors (FIIs)** - FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- **Domestic institutional investors (DIIs)**- DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- **Emerging market (EM) economy**- An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- **Organization of the Petroleum Exporting Countries (OPEC)**- The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- **Federal Open Market Committee (FOMC)**- The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members - seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- **International Monetary Fund (IMF)**- The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

## About Us

PNB MetLife India Insurance Company Limited (PNB MetLife) is one of the fastest growing life insurance companies in the country, having as its shareholders, MetLife International Holdings LLC. (MIHL), Punjab National Bank Limited (PNB), Jammu & Kashmir Bank Limited (JKB), M. Pallonji and Company Private Limited and other private investors, with MIHL and PNB being the majority shareholders. PNB MetLife has been present in India since 2001.

PNB MetLife brings together the financial strength of a leading global life insurance provider, MetLife, Inc., and the credibility and reliability of PNB, one of India's oldest and leading nationalised banks.
