Monthly Fund Performance
June 2017 Edition

Month gone by - A snapshot

Emerging market equities remained range-bound during the month. Indian equity market was weak as investors played cautious ahead of the GST roll-out. Global bond yields hardened last month as central banks signalled normalisation of monetary policy. Domestic bond yields were volatile but ended lower amid build-up of expectations of rate-cut and robust inflows by foreign institutional investors (FIIs). Going forward, the monetary policy stance of RBI and initial impact of GST implementation on the economy are crucial events to watch out for.

Global central banks look at normalising monetary policy

The US Fed hiked Fed Funds rate by 25bps and unveiled a roadmap to gradually shrink its balance sheet in the later part of this year. This was despite declining inflation trajectory amid falling global commodity prices. The European Central Bank and Bank of England also signalled their intent of normalising monetary policy stance amid improving macro-economic environment. This led to an increase in global bond yields in the last week of June.

GST sees light of the day

The much-awaited indirect tax reform, GST, has come into effect from July 1, 2017. While disruptive in the near-term as businesses take time to align and adjust to the new framework, GST is expected to bring large-scale benefits to the economy in the medium to long-term. GST is likely to provide a boost to manufacturing sector facilitated by 1) elimination of cascading of taxes, 2) reduction in inter-state trade barriers and 3) simplification of tax structure. Additionally, the government is likely to gain from higher tax collections emanating from better tax compliance.

Fixed income market performance

Fixed income market rallies but remains volatile: Fixed income market started the month of June on a positive note, continuing the previous month's rally. This was led by strengthened expectations of a rate cut following 1) a softened RBI policy with sharp downward revision in inflation forecasts, 2) timely onset of monsoon and 3) declining crude oil and commodity prices. However, yields moved up towards the last week, mimicking the global trend. Overall, the 10-year g-sec yield fell by 15bps to end the month at 6.5% amid strong FII inflows (June: \$4bn; YTD: \$14.6bn).

Outlook: Domestic factors that are likely to influence fixed income market in the near-term include 1) impact of implementation of GST and 7th Pay Commission allowances on inflation trajectory, 2) RBI's stance in the upcoming monetary policy review and 3) steps taken by RBI to absorb excess liquidity. On the global front, monetary policy stance of global central banks is a crucial event to watch out for.

Equity market performance

Equity market breaks the five-month long rally: After five consecutive months of positive returns, Indian equity markets ended marginally lower in June. This was led by 1) concerns ahead of GST implementation, 2) farm loan waiver by several states, 3) RBI's directive to banks to increase provisioning for 12 stressed accounts referred for bankruptcy and 4) hawkish commentaries by global central banks. Both domestic and foreign institutional investors were buyers during the month. The Nifty Index declined by 1% in June; however, the YTD returns remain strong at 16%.

Outlook: Given rich valuations, equity markets may remain in consolidation mode in the near-term. On the domestic front, performance of Q1FY18 corporate earnings and management commentaries, particularly in the wake of GST implementation, remains crucial for equity markets. On the global front, geo-political risks as well as monetary policy stance of global central banks are important factors for sustenance of FII inflows. Our medium-term outlook on the market remains strong on account of pick-up in economic activity led by consumption and higher public spending.

Sanjay Kumar

How can an insurance policy help protect and bolster your future investments?

Have you thought about how your family will continue with their current lifestyle if you were not there tomorrow? Will your spouse be able to pay the children's school fees? Will your parents be able to get the medical attention they require? If not, it's not late even now. The primary reason for investing in an insurance plan should be to ensure that the family income is protected even if something unfortunate were to happen to the breadwinner. With the evolution of the financial services category, the insurance plans also serve an important objective of creating a corpus for planned expenses like retirement, prepayment of loans or child's education or marriage. Interestingly, as per Nielsen Life 2013 research, while 51% have quoted protection as the key reason for investing in life insurance, close to 46% are investing for their child's future and 43% for retirement.

Now let's look at various options available for you to build a robust financial portfolio. To begin with, you should look at a term plan to ensure that your family receives a lump-sum incase something unfortunate were to happen impacting the regular income flow. There are income protection plans also available to ensure regular income for your family. After reviewing your financial portfolio and life-stage, you should consider investing towards retirement to protect your golden years. If you have children, it is advisable to consider investing in an insurance plan at an early stage to build a corpus. While there are many instruments available for savings in the market, insurance is the only product that ensures that the savings you planned for is available for your child/ family whether you are around or not. This is possible due to the 'life cover' attached to your policy which ensures a lump-sum incase of death of the primary wage earner. Some select child plans also come with the 'waiver of premium' feature which ensures that all premiums are paid by the insurance company incase something happens to the parent and the child gets the corpus planned on maturity.

The key to ensuring that your family is financially secure is to start early and to understand your financial goals before choosing products.

Quantitative Indicators

- **Standard Deviation (SD)** - It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- **Beta** - It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- **Sharpe Ratio** - It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- **Average Maturity** - It is the weighted average period of all the maturities of debt securities in the portfolio.
- **Modified Duration (MD)** - It is the measurable change in the value of a security in response to a change in interest rates.
- **Bond yield** - Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

Macroeconomic Indicators

- **Macroeconomics** - Macroeconomics is the branch of economics that studies the behavior and performance of an economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate, gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the economy. Government and corporations use macroeconomic models to help in formulating of economic policies and strategies.
- **Gross Domestic Product (GDP)** - GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- **Gross value added (GVA)** - GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- **Index of Industrial Production (IIP)** - The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- **HSBC Purchasers Managers' Index (PMI)** - Three types of indices - Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- **Inflation** - Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

Macroeconomic Indicators

- **Nominal interest rate** - Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- **Real interest rate** - Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- **Monetary Policy** - Monetary policy is the macroeconomic policy laid down by the Central bank. It involves management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption, growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy involves reduction in money supply to control inflation in the economy.
- **Liquidity** - The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- **Fiscal Deficit** - This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- **Current Account Deficit (CAD)** - Current account deficit is a measurement of a country's trade where the value of imports of goods and services as well as net investment income or transfer from abroad is greater than the value of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency, which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the opposite of this.
- **Investment** - In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

Market Indices

- **Nifty 50 Index** - It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- **CRISIL Composite Bond Fund Index** - It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

Fixed Income Indicators

- **Repo Rate** - The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- **Cash Reserve Ratio (CRR)** - CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

Fixed Income Indicators

- **Marginal Standing Facility (MSF)** - It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- **Statutory Liquidity ratio (SLR)** - In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

Others

- **Goods and Services Tax (GST)** - The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- **Foreign institutional investors (FIIs)** - FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- **Domestic institutional investors (DIIs)** - DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- **Emerging market (EM) economy** - An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- **Organization of the Petroleum Exporting Countries (OPEC)** - The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- **Federal Open Market Committee (FOMC)** - The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members - seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- **International Monetary Fund (IMF)** - The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

ULIP

- **MetLife Mera Wealth Plan**
UIN: 117L098V01

MetLife Mera Wealth Plan is a unit linked plan that provides a financial blueprint for goals related to every stage in life. With investment options like self-managed and systematic transfer, this product caters to every risk appetite.
