ULIP Fund Monthly Fund Performance

September 2019 Edition

Month gone by – A snapshot

The month of September saw Indian equity market outperform global markets, on the back of strong measures announced by government to boost the economy. Global equity market indices were up around 2% whereas MSCI India was up 3%. INR appreciated marginally. Bond yields inched up in response to the fiscal measures. Globally, all asset classes experienced sharp volatility following the drone attacks on Saudi Arabian oil fields, which impacted a significant part of global oil supply and led to a sharp oil price spike. However, swift measures to restore production, benign global sentiments and rate cuts by various central banks saw calmness returning to markets.

Strong government actions to support the economy

The month saw several initiatives from the government to revive the economy. Income tax rate for existing corporates has been reduced from ~35% to ~25%. For manufacturing companies set up after Oct 1, 2019 the tax rate will be ~17%. This sharp cut is expected to support corporate profitability and accelerate growth in private investments. To boost the export sector, a new scheme to refund taxes and duties on exports, easier export credit and additional funding for exporters were announced. To revive the housing sector, the government has announced INR 200bn corpus to provide last mile financing, thereby making delayed projects viable.

Macroeconomic update

With 10% above average rainfall, India had a good monsoon after many years. Despite uneven spatial distribution, sowing remains on track. Early Kharif harvest estimates are in-line with previous year and Rabi season is also expected to be strong given higher reservoir levels. This would support RBI's benign inflation outlook for the year. Retail inflation remained steady at 3.2% given general slowdown in the economy. Current account deficit (CAD) for Q1FY20 narrowed to 2% of GDP, supported by higher services income and remittances.

Fixed income yields inch up: Global fixed income yields were steady given the rate cut by US Federal Reserve and quantitative easing announced by European Central Bank (ECB). Domestic yields inched up 14bps during the month as government's tax cut measures are expected to impact the fiscal deficit. During the month, foreign investors turned net sellers of US\$0.2bn in the fixed income market.

Outlook: On the back of benign inflation and weakness in the economy, we expect RBI to continue with monetary easing. Actions of global central banks, government measures to manage fiscal deficit, divestment plans and further measures to revive the economy remain key monitorables. The fixed income market is expected to remain range-bound with a positive bias.

Equity market react positively: Indian equity market logged its highest single day gain in almost a decade following the announcement of reduction in tax rates for corporates. Nifty index was up 4.1% during the month. Sectors such as financial services, consumption and manufacturing, which are major beneficiaries of tax cuts, outperformed significantly. Defensive sectors such as information technology and pharmaceuticals saw some correction. Foreign funds turned buyers in September with net purchase of US\$1bn, while domestic funds bought equities worth US\$1.8bn.

Outlook: Global monetary environment is turning increasingly benign as seen from continued rate cuts by central banks and the quantitative easing program launched by ECB. On the domestic front, corporate capital expenditure is expected to pick up post the fiscal measures announced by the government. It is likely to reflect in economic growth in second half of the year. Given this backdrop, we remain positive on equity markets with a medium to long term horizon.

Sanjay Kumar

Chief Investment Officer

Notes:

1. Morningstar Rating is based on Morningstar Risk-Adjusted Return (MRAR) framework. MRAR is a measure of fund's past performance after adjusting for risk.
2. The above information is as of August 31, 2019 as the performance data for September is yet to be provided by Morningstar.
3. The tables above excludes Multiplier II fund as it is not rated by Morningstar (given its restricted investment universe).

Morningstar rating methodology: Morningstar sets the distribution of funds across the rating levels, assigning three/five star ratings as follows:

1. All funds in the category are sorted by MRAR % Rank for the respective time period in descending order.
2. Starting with the highest MRAR % Rank, those in the top 10% of such funds receive a 5-star rating.
3. The next 22.5% (i.e., ranking below the top 10% and up to the top 32.5%) of funds receive a 4-star rating, and the following 35% (i.e., ranking below the top 32.5% and up to the top 67.5%) of funds receive a 3-star rating.
4. The next 22.5% (i.e., ranking below the top 67.5% and up to the top 90%) of funds receive a 2-star rating.
5. The remaining funds (i.e., the bottom 10% of the category) receive a 1-star rating.

NAV Movement

Date of Inception: December 21, 2010

Quantitative Indicators

- **Standard Deviation (SD)** - It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- **Beta** - It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- **Sharpe Ratio** - It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- **Average Maturity** - It is the weighted average period of all the maturities of debt securities in the portfolio.
- **Modified Duration (MD)** - It is the measurable change in the value of a security in response to a change in interest rates.
- **Bond yield** - Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

Macroeconomic Indicators

- **Macroeconomics** - Macroeconomics is the branch of economics that studies the behavior and performance of an economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate, gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the economy. Government and corporations use macroeconomic models to help in formulating of economic policies and strategies.
- **Gross Domestic Product (GDP)** - GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- **Gross value added (GVA)** - GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- **Index of Industrial Production (IIP)** - The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- **HSBC Purchasers Managers' Index (PMI)** - Three types of indices - Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- **Inflation** - Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

Macroeconomic Indicators

- **Nominal interest rate** - Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- **Real interest rate** - Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- **Monetary Policy** - Monetary policy is the macroeconomic policy laid down by the Central bank. It involves management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption, growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy involves reduction in money supply to control inflation in the economy.
- **Liquidity** - The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- **Fiscal Deficit** - This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- **Current Account Deficit (CAD)** - Current account deficit is a measurement of a country's trade where the value of imports of goods and services as well as net investment income or transfer from abroad is greater than the value of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency, which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the opposite of this.
- **Investment** - In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

Market Indices

- **Nifty 50 Index** - It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- **CRISIL Composite Bond Fund Index** - It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

Fixed Income Indicators

- **Repo Rate** - The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- **Cash Reserve Ratio (CRR)** - CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

Fixed Income Indicators

- **Marginal Standing Facility (MSF)** - It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- **Statutory Liquidity ratio (SLR)** - In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

Others

- **Goods and Services Tax (GST)** - The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- **Foreign institutional investors (FIIs)** - FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- **Domestic institutional investors (DIIs)** - DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- **Emerging market (EM) economy** - An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- **Organization of the Petroleum Exporting Countries (OPEC)** - The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- **Federal Open Market Committee (FOMC)** - The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members - seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- **International Monetary Fund (IMF)** - The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

ULIP

- **PNB MetLife Whole Life Wealth Plan**

UIN: 117L118V01

PNB MetLife Whole Life Wealth Plan is a whole life unit linked plan that provides tailor-made solutions to accumulate wealth along with life protection, including an option where wealth creation doesn't take a back seat even during critical illness.

- **MetLife Smart Platinum**

UIN : 117L066V02

A Unit Linked Whole life plan for your changing life stage needs. Along with 6 Unit Linked Funds & investment strategies like auto rebalancing and Systematic Transfer Option, this plan has free unlimited switches online, which allows you to manage your investments with changing market conditions.

Traditional Products
