August 2021 Edition

THE LINKED INSURANCE PRODUCTS DO NOT OFFER ANY LIQUIDITY DURING THE FIRST FIVE YEARS OF THE CONTRACT. THE POLICYHOLDER WILL NOT BE ABLE TO <u>SURRENDER/WITHDRAW THE MONIES IN</u>VESTED IN LINKED INSURANCE PRODUCTS COMPLETELY OR PARTIALLY TILL THE END OF THE FIFTH YEAR.

The month gone by - A snapshot

Global equity markets continued to rally, as accommodative policies and gradual revival in economic activities aided investor sentiments. The spread of 'Delta' variant has, so far, had limited impact in most developed markets, which have vaccinated a significant proportion of their population. However, economic activities in China moderated due to imposition of lockdown measures to control the 'Delta' variant.

Both emerging markets as well as developed markets gained 2% in August. The revival in economic activities amidst decline in Covid-19 cases coupled with strong domestic inflows enabled India to significantly outperform global markets with 11% gain in MSCI India Index.

Inflation pressures, exacerbated by continuing supply chain issues, continue to persist globally. Though major developed market central banks have indicated continuation of policy support, some emerging market central banks have initiated policy tightening.

Government focuses on capital expenditure to support economic revival

The April-June 2021 GDP data indicates that the onset of Covid-19's second wave significantly impacted economic activities. However, recent high frequency data points indicate that economic activity has now recovered to pre-pandemic levels. The significant increase in pace of vaccinations is likely to reduce the impact of disruption from a possible 'third wave'.

The Prime Minister has announced a Rs 100 lakh crores 'PM Gati Shakti Master Plan', focused on creating infrastructure. Simultaneously, a National Monetisation Pipeline has been unveiled, which will help the government raise Rs 6 lakh crores over a four-year period, by leasing existing assets. Both these initiatives will result in significant improvement in economic efficiency and support future GDP growth.

RBI reiterates monetary policy support

Although there were discussions in the Monetary Policy Committee (MPC) on the need to initiate policy normalization, the committee retained its 'accommodative' stance. In recent weeks, the RBI Governor has reiterated that the central bank will continue to focus on revival of economic growth. The July inflation has declined below RBI's threshold of 6%.

Outlook: Recent fiscal data indicates continuing improvement in central government's finances. The dovish commentary by RBI Governor has helped to calm market sentiments. Market yields are likely to trade range-bound in the near term.

Equity markets rally to record high

Nifty index was up 9%, and closed at all-time high levels, buoyed by improved global sentiments and continued momentum in domestic recovery. The acceleration in vaccinations is aiding stronger-than-expected recovery in consumption-oriented sectors. Information Technology, Fast Moving Consumer Goods (FMCG) and Telecom sectors outperformed, while Metals, Pharmaceuticals and Automobile sectors underperformed in August.

Outlook: Indian equity markets are currently being driven by three broad factors: a) strong economic growth, b) improvement in corporate performance and upgrades in earnings estimates, and c) robust equity inflows from domestic investors. We expect these factors to sustain owing to structural changes which are underway in the economy. While valuations look stretched in the near term, our outlook on equities remains positive from a medium to long term perspective.

Sanjay Kumar Chief Investment Officer

Quantitative Indicators

- Standard Deviation (SD) It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- Beta It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- Sharpe Ratio It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- Average Maturity It is the weighted average period of all the maturities of debt securities in the portfolio.
- Modified Duration (MD) It is the measurable change in the value of a security in response to a change in interest rates.
- Bond yield Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

Macroeconomic Indicators

- Macroeconomics Macroeconomics is the branch of economics that studies the behavior and performance of an
 economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate,
 gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the
 economy. Government and corporations use macroeconomic models to help in formulating of economic policies
 and strategies.
- Gross Domestic Product (GDP) GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- Gross value added (GVA) GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- Index of Industrial Production (IIP) The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- HSBC Purchasers Managers' Index (PMI) Three types of indices Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- Inflation Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

Macroeconomic Indicators

- Nominal interest rate Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- Real interest rate Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- Monetary Policy Monetary policy is the macroeconomic policy laid down by the Central bank. It involves
 management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption,
 growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a
 tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money
 supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy
 involves reduction in money supply to control inflation in the economy.
- Liquidity The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- Fiscal Deficit This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- Current Account Deficit (CAD) Current account deficit is a measurement of a country's trade where the value of
 imports of goods and services as well as net investment income or transfer from abroad is greater than the value
 of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency,
 which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the
 opposite of this.
- Investment In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

Market Indices

- Nifty 50 Index It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- CRISIL Composite Bond Fund Index It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

Fixed Income Indicators

- **Repo Rate** The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- Cash Reserve Ratio (CRR) CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

Fixed Income Indicators

- Marginal Standing Facility (MSF) It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- Statutory Liquidity ratio (SLR) In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

Others

- Goods and Services Tax (GST) The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- Foreign institutional investors (FIIs) FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- Domestic institutional investors (DIIs)- DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- Emerging market (EM) economy- An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- Organization of the Petroleum Exporting Countries (OPEC)- The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- Federal Open Market Committee (FOMC)- The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- International Monetary Fund (IMF)- The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

About Us

Milkar life aage badhaein

PNB MetLife India Insurance Company Limited (PNB MetLife) is one of the fastest growing life insurance companies in the country, having as its shareholders, MetLife International Holdings LLC. (MIHL), Punjab National Bank Limited (PNB), Jammu & Kashmir Bank Limited (JKB), M. Pallonji and Company Private Limited and other private investors, with MIHL and PNB being the majority shareholders.
